YBT.

YOUR BUSINESS TODAY

We build your business app or platform in 2–4 weeks.

Your own app, built around how your business works, plus an AI assistant your team can simply talk to. What we do, the seven steps we take you through, and what your business is left with.

For UK business owners and managing directors.

consulting@yourbusiness.today · yourbusiness.today

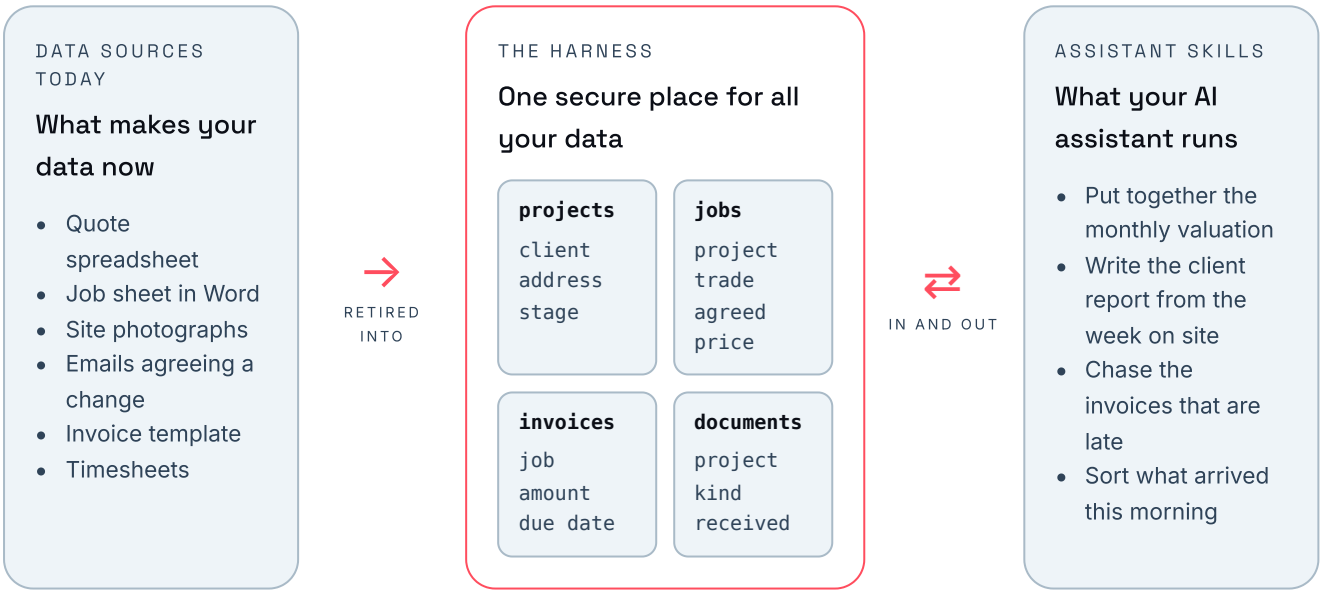

WHAT WE DO FOR YOUR BUSINESS

From the first conversation to long after launch.

This is for a business that already works. You have customers, a reputation and people who know their trade. What you do not have is one place where the business is. The quote is in one system and the job is in another. The report is typed up by hand. Two or three people carry the rest in their heads.

We map how your business works, build one secure place for its data, put your own app over it and connect your AI assistant to the same system. It is live in 2–4 weeks. Then we stay on, and you change it however you want for one monthly fee.

In one picture

A WAY IN

Your web app

Screens over your data, built around how your team really works.

A WAY IN

Your AI assistant

Everything the app can do, from a chat in Claude or ChatGPT.

Roles. One set of roles on both. What a person may see or do on the screen is exactly what their assistant may see or do.

THE SEVEN STEPS

From the first conversation to long after launch.

01

Map your data sources

Week one · with the people who do the work

We sit with the people who do the work and map everything that comes into your business and everything that goes out: the quote, the order, the job sheet, the invoice, the photograph that proves the work was done, and the processes that turn one into the next.

You get: a written map of your business in plain English, and a fixed price for the build. Yours to keep whether or not you go further.

02

Build your data harness

Weeks one and two

The harness is one secure place for everything the map found. Every fact about your business has its place in it, every value is checked before it goes in, and every person sees only what their role allows.

You get: your data in one place, backed up, with the first spreadsheets and documents retired into it.

03

Your web app

Weeks two to four

Screens over the harness, built around how your team really works: the jobs at the stage they are really at, the invoices that are due, the decisions that need the owner. No training course, because it works the way you already do.

You get: your own app, live and in use, at your own web address. New screens are asked for in a chat and built without touching the data underneath.

04

Your AI connector

Live with the web app

Your AI assistant, Claude or ChatGPT, is connected to the same system. Ask what is in flight, raise a job, chase an invoice or run the month end from a chat, and it does exactly what the app does under exactly the same permissions.

You get: everyone on your team with an assistant that knows your business, and can do nothing through it that they could not do on the screen.

05

Skills for your assistant

From week three · one process at a time

Your processes are written down as skills your assistant follows from start to finish: the valuation put together every month, the report written from the week on site, the invoice that has to be chased. The judgement stays with your people and the repetitive work goes to the assistant.

You get: a growing set of skills in your own words. Change one and it is in force from your next conversation; add one whenever the business changes.

06

Run it in the open

From the first conversation

Your business gets a project in our project management system on day one. Every goal and task has its own conversation, you see what is being worked on and what comes next, and your own assistant can read the project and raise work on it.

You get: nothing hidden and nothing dropped. You always know where the build is, and you can ask for a change from anywhere.

07

Change it however you want

Monthly retainer · one monthly fee · cancel on a month’s notice

Most businesses keep us on, because a business never stops changing. A new screen, a new process for the assistant, a new record the business now needs: ask for it in a chat and watch it being built. Hosting, backups and support are all inside the same fee.

You get: your app kept running, kept current and kept yours. The harness, the app and the skills belong to you, and they leave with you if you ever leave us.

What it costs

The build is one fixed price, agreed before it starts: the map, the harness, your web app and your AI connector. After launch it is one monthly fee for hosting, backups, support and the changes you ask for, and you can cancel on a month’s notice. Nothing is added on top. The written offer carries the figures. There is nothing to negotiate your way into.

What we ask of you

- **The first week with the people who do the work,** rather than their managers’ account of them.
- **One person who can decide.** Not a committee. The work moves at the speed of the slowest approval.
- **Honesty about a bad week.** We are no use to you if we are shown the tidy version.

CASE STUDY

Jewel Bespoke Build

A family run construction company in Surrey. Jewel build loft conversions and extensions across the South of England and take on whole house renovations. The family has sixty five years of trade experience.

The building was never the problem. It was everything around it. The day on site arrived in the office as messages and photographs. Somebody then had to turn them into a report for the client. Drawings came back marked up. Valuations were put together by hand. The person who knew where everything was could never take a Friday off.

We spent a week on paper with the people who do the work. Then we spent a week proving the idea in code. Everything arriving at the business is a communication and a person makes one decision about it. After that the harness groups them and the assistant writes what has to be written.

Jewel now run on a portal that shows every project at the stage it is really at. A plain English request becomes a build they can watch. Their own AI assistant can read a job or raise a request without opening the site.

THE TEAM

The people you meet are the people who do the work.

Nigel Reilly

Managing Partner

Nigel sets the direction of the practice. A career across several industries has given him the commercial judgement and the connections the firm runs on.

Jeremy Ferendinos

Founding Partner

Jeremy looks after the financial and commercial side. He can read a business on paper as well as he can read it on the floor. He brings client relationships of his own.

James Beadle

Founding Partner

James builds the systems. He has done it for large multinational clients and for small and medium businesses. Those are two very different jobs and he is fluent in both.

Book your free discovery call.

A free conversation about what your business does and where the time goes. We tell you honestly whether an app would pay for itself, and there is no pitch deck.
