YOUR BUSINESS TODAY

We use AI to streamline your business today.

What we do. The process we follow. What your business is left with at the end of it.

Prepared for a business that already works and wants to run itself.

WHAT WE DO

Building you tools which will grow with AI.

We use our custom tools to analyse your business. We identify the areas in which our solutions will have the greatest impact. Your bespoke framework gives you immediate power to put tailored AI solutions in place that have real results.

We build your automation platform in parallel with the running of your existing systems. That makes for a seamless move of every process to its AI upgrade. Each piece goes live and starts earning before the next is built.

In one picture

A WAY IN

Dashboards

A screen for each thing and a view for each question like any software.

A WAY IN

Your AI assistant

The same actions as the screens performed from inside Claude or ChatGPT.

Roles. One set of roles on both. What a person may see or do on the screen is exactly what their assistant may see or do.

THE PROCESS

Five steps. You can stop after any of them.

STEP 1

Map your data sources

Two weeks · fixed price · no commitment to go further

Every business creates its data somewhere. The sheet a quote is worked out in. The document a report is typed into. The message a job is agreed on. The photograph that proves the work was done. We spend two weeks with the people who make them and we map every source.

You get: a written map of your data sources. What each one creates and who creates it and where it goes next. With it the order the harness should take them in and a fixed price for building it. Yours to keep whether or not you go further.

STEP 2

Build the harness

The first build stage · six to eight weeks · agreed before it starts

The harness is one secure place that holds what those sources hold. Every fact about your business has its place in it and every value is checked before it goes in. Your people keep working the way they work. The harness is where the result now lives.

You get: your data in one place you can see and search with the first sources retired into it. From this stage on you have dashboards over the harness and your AI assistant connected to it. Both are live from the first week.

STEP 3

Teach the assistant the processes

One process a stage · agreed before it starts · stop after any stage

Around the harness sit the processes. The valuation put together every month. The report written from the week on site. The chase for the invoice that is late. We write each one as a skill your own AI assistant runs from start to finish. It reads the harness for what it needs and writes the result back.

You get: one process running itself. The judgement stays with the person who has it and the repetitive work goes to the assistant. Every output lands in the harness so the next process can start from it.

STEP 4

Two ways in

Included with the harness · grows with every skill

Everything in the harness is reached in two ways. Dashboards show it the way any software would with a screen for each thing and a view for each question. Your AI assistant does exactly what the website does from inside a chat. The same actions and the same checks with no browser in the middle.

You get: one set of roles deciding who may see and do what. It is enforced on both in the same way. A person who cannot approve an invoice on the screen cannot approve it through their assistant either.

STEP 5

Run it

One monthly fee · cancel on a month's notice

Once a stage is paid for the harness and the skills are yours. So is the written record of how your business works. Most businesses ask us to stay because the work never stops changing. A new process to teach. A new record the business now needs.

You get: everything kept running and kept current. Hosting and backups and support all sit inside one monthly figure. Your project in our project management system stays open so you can raise requests and watch them being built. A standing day of change work each month.

What it costs

Mapping your data sources is a fixed price. The harness and each skill are agreed before they start. Running it is one monthly fee you can cancel on a month's notice. Hosting and backups and support are all inside that one figure with nothing added on top. The written offer carries the figures. There is nothing to negotiate your way into.

What we ask of you

- **Two weeks of access** to the people who create the data rather than their managers' account of them.
- **One person who can decide.** Not a committee. The work moves at the speed of the slowest approval.
- **Honesty about a bad week.** We are no use to you if we are shown the tidy version.

CASE STUDY

Jewel Bespoke Build

A family run construction company in Surrey. Jewel build loft conversions and extensions across the South of England and take on whole house renovations. The family has sixty five years of trade experience.

The building was never the problem. It was everything around it. The day on site arrived in the office as messages and photographs. Somebody then had to turn them into a report for the client. Drawings came back marked up. Valuations were put together by hand. The person who knew where everything was could never take a Friday off.

We spent a week on paper with the people who do the work. Then we spent a week proving the idea in code. Everything arriving at the business is a communication and a person makes one decision about it. After that the harness groups them and the assistant writes what has to be written.

Jewel now run on a portal that shows every project at the stage it is really at. A plain English request becomes a build they can watch. Their own AI assistant can read a job or raise a request without opening the site.

THE TEAM

The people you meet are the people who do the work.

Nigel Reilly

Managing Partner

Nigel sets the direction of the practice. A career across several industries has given him the commercial judgement and the connections the firm runs on.

Jeremy Ferendinos

Founding Partner

Jeremy looks after the financial and commercial side. He can read a business on paper as well as he can read it on the floor. He brings client relationships of his own.

James Beadle

Founding Partner

James builds the systems. He has done it for large multinational clients and for small and medium businesses. Those are two very different jobs and he is fluent in both.

Tell us what your business is struggling with.

No pitch deck and no discovery fee. Just a conversation about what is not working and an honest answer about whether we can fix it.
